

# XR50 loudspeaker

- The XR50 speakers deliver uncompromised sound quality in a compact design. They produce a dramatically larger sound than their size would suggest when powered by a McIntosh amplifier.
- McIntosh engineers have created the perfect marriage between powerful McIntosh amplification and the McIntosh speaker collection. The company's speaker development center in Binghamton, NY includes a full size anechoic chamber; an invaluable tool in the design of this new generation of loudspeakers.
- Available in Gloss Black and Red Walnut, the XR50's high-gloss finishes and fine cabinetry will be welcomed in the most elegant environments.
- The XR50 speakers produce a full, three-dimensional stereo sound stage that belies their compact dimensions.
- Designed for use with 75 to 300 watts, the XR50 may be powered by large amplifiers without strain.
- The McIntosh front panel emblem can be illuminated using the Power Control facility on complimentary McIntosh components.
- Our patented Solid Cinch™ speaker binding posts provide the most secure connection with all cables.

Full spectrum sound quality from compact loudspeakers.
