MT2
Precision Turntable
Owner’s Manual
Thank You

Your decision to own this McIntosh MT2 Turntable ranks you at the very top among discriminating music listeners. You now have “The Best.” The McIntosh dedication to “Quality,” is assurance that you will receive many years of musical enjoyment from this unit. Please take a short time to read the information in this manual. We want you to be as familiar as possible with all the features and functions of your new McIntosh.

Please Take A Moment

The serial number, purchase date and McIntosh Dealer name are important to you for possible insurance claim or future service. The spaces below have been provided for you to record that information:

Serial Number: _______________________________
Purchase Date: _______________________________
Dealer Name: ________________________________

Technical Assistance

If at any time you have questions about your McIntosh product, contact your McIntosh Dealer who is familiar with your McIntosh equipment and any other brands that may be part of your system. If you or your Dealer wish additional help concerning a suspected problem, you can receive technical assistance for all McIntosh products at:

McIntosh Laboratory, Inc.
2 Chambers Street
Binghamton, New York 13903
Phone: 607-723-3515
Fax: 607-723-1917

Customer Service

If it is determined that your McIntosh product is in need of repair, you can return it to your Dealer. You can also return it to the McIntosh Laboratory Service Department. For assistance on factory repair return procedure, contact the McIntosh Service Department at:

McIntosh Laboratory, Inc.
2 Chambers Street
Binghamton, New York 13903
Phone: 607-723-3515
Fax: 607-723-1917

General Information

Caution: To prevent possible damage to the turntable platter bearing, do not transport the MT2 Precision Turntable with the platter installed.

1. For additional connection information, refer to the owner’s manual(s) for any component(s) connected to the MT2 Precision Turntable.
2. The MT2 Precision Turntable comes with the Sumiko BP2 High Output Moving Coil Cartridge.
3. It is recommended the Professionals at your McIntosh Dealer, who are skilled in all aspects of Turntables and Phono Cartridges, install the MT2 Precision Turntable and any associated audio equipment.
4. For optimum performance, the setup and adjustment of the MT2 Precision Turntable requires special test recordings and test/measurement equipment. Contact your McIntosh Dealer for additional information and assistance.
5. The MT2 Precision Turntable is supplied with the Sumiko Blue Point 2 High Output Moving Coil Cartridge. The Sumiko Blue Point 2 output level is compatible with the MM (Moving Magnet) Input on most McIntosh Preamplifiers, Integrated Amplifiers and A/V Control Center. It is designed to playback 33-1/3 rpm and 45 rpm vinyl recordings. Contact your McIntosh Dealer for additional information and assistance.
6. When discarding the unit, comply with local rules or regulations. Batteries should never be thrown away or incinerated but disposed of in accordance with the local regulations concerning battery disposal.
7. For additional information on the MT2 and other McIntosh Products please visit the McIntosh Web Site at www.mcintoshlabs.com.

8. When an AC Line Cord is used to connect the supplied AC / DC Adapter to an AC Outlet, it is important the line cord conductor size is a minimum 0.75mm² for each leg of the two conductor cord.
9. If it should become necessary to replace the supplied AC / DC Adapter and/or the plug adapters, order part number 320508SP from the McIntosh Parts Department. Refer to the illustration below.

Phono Cartridge Connection Information

Tonearm Headshell Wiring
Refer to the following list of wire colors in the headshell for installing the cartridge into the Headshell:

<table>

Introduction
The McIntosh MT2 Precision Turntable with the Sumiko BP2 High Output Moving Coil Cartridge offers the latest in playback of vinyl recordings. A full complement of performance features allows for the enjoyment of all recordings reproduced with flawless realism. The advanced electronic and mechanical design ensures many years of smooth trouble free operation.

Performance Features

• Advanced Technology Turntable
The MT2 combines the latest technology in Phono Cartridges, Tone Arms, Mechanical Suspensions and Record Platter Rotation for superb performance and accurate operation.

• Moving Coil Cartridge
The Sumiko BP2 High Output Moving Coil Cartridge has the inherent correctness of the impeccable mechanical and electrical design. High impedance, together with high output voltage, ensures noise free musical reproduction. This unique high output design features an alloy cantilever, elliptical diamond stylus with exceptional tracking capability. The ruler-flat frequency response from 20Hz to 20kHz provides solid realistic bass, uncolored midrange and natural high frequencies.

• Tone Arm
The MT2 tonearm is made from dural aluminium with special damping material. The tonearm is both light in weight and highly rigid. The noise free vertical bearings are made from two high precision ceramic surfaces with damping fluid. The horizontal bearing is a gimballed sapphire design.

• Turntable Platters
The full size outer platter is made from a special dynamically balanced polyoxymethylene (POM), weighs 5.07 pounds, 1.18 inches thick. This helps to resist and absorb external vibrations from reaching the record during playback and its large mass provides the perfect flywheel action for stable playback speed. The inner platter is made of CNC-precision milled aluminium, weighs 0.96 pounds and is six and one quarter inches in diameter.

• Precision Motor and Drive Electronics
The DC motor is fed by an external voltage-stabilized power supply and is completely decoupled from the chassis, isolating the record from any mechanical interference.

• Two Playback Speeds with fine Adjustments
The MT2 Turntable has two playback speed, 33 rpm and 45 rpm. There is a separate trim adjustment allowing for accurate music reproduction for each of the two speeds.

• Bearing
The MT2 Turntable Platter rotates on a Polished and Tempered Steel Shaft in a sintered bronze bushing and is coated with Teflon.

• Multi-Layered Dampened Chassis
The MT2 Turntable Chassis has a resonance optimized and highly compressed wood chassis with black lacquer. The top and middle plate which is made of acrylic also absorb vibrations.

• Fiber Optic Solid State Illumination
The even illumination of the top panel and the turntable platter is accomplished by the combination of custom designed fiber optic light diffusers and extra long life light emitting diodes (LEDs).
Dimensions

The following dimensions can assist in determining the best location for your MT2.

Front View of the MT2

17-13/16"  
45.2cm

4-1/4"  
10.8cm

5"  
12.7cm

Note: The height measurements are with the Blue Point 2 Cartridge installed.

Rear View of the MT2

17-13/16"  
45.2cm

13-3/4"  
34.9cm

Side View of the MT2

15"  
38.1cm

4-1/4"  
10.8cm

10-7/8"  
27.6cm
Unpacking the Turntable

To protect the fine finish of the MT2 Precision Turntable during the assembly and adjustment process, it is advisable to prepare a suitable clean working area with a soft, clean fabric, such as a bed linen or blanket.

It is recommended that the Professionals at your McIntosh Dealer, who are skilled in all aspects of installation and operation, unpack, assemble, adjust and install the MT2 Precision Turntable.

**CAUTION:** To prevent possible damage to the turntable platter bearing, do not move the MT2 Precision Turntable after the Outer Platter is installed.

1. Referring to the illustration on the right, open the shipping carton and carefully remove the following items from the carton and place them in the previously prepared working area:
   
   A. Owner’s Manual Pack, Record Mat and Cartridge Alignment Gauge and Pair of Gloves
   
   B. Dust Cover
   
   C. Turntable
   
   D. Outer Platter
   
   E. Accessories:
      
      1. Record Clamp
      2. AC/DC Adapter and Plugs
      3. Belt
      4. Grounding Cable
      5. Bearing Oil¹
      6. Bubble Level
      7. Cartridge Mounting Screws
      8. Tonearm Counter Weight
      9. Screw Driver and Allen Wrenches
      10. Stylus Force Gauge

2. Proceed to Assembly of the Turntable starting on the next page.

**CAUTION:** To prevent possible damage to the Cartridge Stylus, DO NOT remove the Stylus Guard at this time.

¹ Some time in the distant future, the inside vertical shaft located below the Inner Platter might require one or two drops of oil.
Assembling the Turntable

Place the Turntable in the location where it will be used. Please keep in mind; the turntable should be the greatest possible distance from the system loudspeakers to reduce the chance of acoustic feedback. To minimize the possibility of the cartridge stylus jumping record grooves, place the turntable on a mechanically stable surface such as wall shelving anchored to wall studs. Perform the following assembly steps:

Note: It is recommended the installation and adjustment of the McIntosh MT2 Precision Turntable be performed by the Professionals at your McIntosh Dealer.

1. Remove the protective mesh from the Turntable Vertical Bearing Shaft. Refer to figure 1.

2. Using the supplied cloth gloves, place the belt onto the circumference of the inner platter and then onto the pulley of the motor. Rotate the inner platter by hand while seating the belt into it. Refer to figure 2.

3. Next, take the Outer Platter and slowly lower it onto the Inner Platter making sure to keep the Outer Platter parallel to the Turntable surface as it is being lowered. Refer to figure 3.

4. Locate the Record Mat and place it on top of the platter. Refer to figure 4.

5. Locate the McIntosh Bubble Level and place it on the Record Mat. Refer to figure 5.

If the Bubble is not in the center circle of the Bubble Level, adjust the height of the Turntable Feet (by rotating them clockwise or counter clockwise) until it is level. Refer to figures 6 and 7 on the next page.
7. Locate the Tone Arm Counterweight and the supplied small bottle of Bearing Oil. Using a small cotton swab (Q-Tip) apply one drop of the oil to the inside center of the Counterweight “O” Rings. Refer to figure 8.

8. Align the inside opening of the Counterweight with the rear end of the Tone Arm. Then slowly rotate the Counterweight until the front vertical surface of it lines up with the center of the Blue Point. The center of Blue Point Position Marking on the surface of the Tone Arm is for the supplied No. 2 Cartridge. Refer to figures 9, 10 and 11.

Note: It is recommended to check the tracking force pressure using the supplied Stylus Tracking Force Gauge as outlined on page 12.

9. Remove the protective film material from the Tone Arm Rest Position. Refer to figures 12 and 13.

Note: If another Phono Cartridge (such as the McIntosh MCC10) is to be used with the MT2 turntable, proceed to “Installing a non-supplied Cartridge” at this time on page 10.
10. Carefully slide off the Stylus Guard from the cartridge by pulling the cover straight down. Refer to figures 14 and 15.

*Note: The Tracking Force Pressure, Anti-Skating and other adjustments have been preset at the factory for optimum performance. For additional information on setting Tracking Force Pressure, Anti-Skating and other adjustments refer to pages 10 thru 12.*

11. Proceed to “How to Connect the Turntable” on page 14.
Installing a non-supplied Cartridge

**CAUTION:** To prevent possible damage to the turntable platter bearing, do not move the MT2 Precision Turntable with the platters installed.

In the event a non-supplied Phono Cartridge is to be installed into the McIntosh MT2 Turntable, please follow the steps below:

*Note: It is recommended that the Professionals at your McIntosh Dealer, who are skilled in all aspects of installation and adjustment of the McIntosh MT2 Precision Turntable, perform the assembly, installation and adjustments.*

1. Un-install the factory installed Phono Cartridge from the MT2 Tone Arm. First, place the Stylus Guard on the Cartridge. Carefully disconnecting the four push-on wire clips from the phono cartridge rear connection pins, using an appropriate tool. Then remove the mounting screws and nuts using the supplied allen wrench. Place the removed cartridge, spacer plate, screws and nuts in a safe place for possible future use. Refer to figures 18 and 19.

2. Locate the Hardware Package supplied with the new cartridge.

3. Using an appropriate tool, attach the four color coded wire lead connections coming from the front underside of the Tone Arm onto the rear of the new Phono Cartridge, following the instructions supplied with the Cartridge. Refer to figure 18. Below is the Tone Arm Headshell wire color lead identification:

   - **Wire Color**
   - Red - Right Channel Positive (+) Signal Connection
   - Green - Right Channel Negative (-) Ground Connection
   - White - Left Channel Positive (+) Signal Connection
   - Blue - Left Channel Negative (-) Ground Connection

4. Position the Cartridge parallel to front and sides of the headshell and secure it with the supplied screws and nuts using the appropriate tools. Refer to figure 19.

5. Proceed to “Tone Arm Adjustments”.

---

**Tone Arm Adjustments**

**Phono Cartridge/Headshell Alignment**

The MT2 Turntable Tone Arm, like all pivoting Tone Arms, follows a slight arc as it transverses across the surface of a phonograph record. By adjusting the distance between the horizontal pivot point of the Tone Arm and the Stylus Tip, the curvature of the arc can be minimized (sometimes referred to as the overhang adjustment). The Tone Arm Headshell of the MT2 Turntable allows for making this adjustment by positioning of the Phono Cartridge relative to the Headshell. Follow the steps below using the supplied McIntosh Tone Arm/Cartridge Alignment Gauge:

1. Remove the Stylus Guard.

2. Place the Gauge over the center spindle post on the Platter and position the Gauge so the curved end is in contact with the horizontal pivot of the Tone Arm. Refer to figures 20 and 21.

---

**Tone Arm/Cartridge Alignment Gauge**

3. With the Anti-Skate Adjustment set to minimum (refer to figure 32), carefully place the Tone Arm onto the Alignment Gauge with the diamond tip of the stylus on the center of the small circle located between the parallel lines. Refer to figures 22 and 23.
Note: It may be necessary to slide the Phono Cartridge forward or backward in the headshell to position the stylus in the center of the circle.

4. It is important the Front and Sides of the Cartridge Body line up with these parallel lines when looking down over the top of the Tone Arm. Refer to figures 23 and 24. If it is not parallel, loosen the mounting hardware securing the Phono Cartridge to the Tone Arm. Reposition the Phono Cartridge so the tip of the stylus is in the center of the small circle and the Front and Sides of the Phono Cartridge are parallel to the lines on the Alignment Gauge. Tighten up the mounting hardware and verify the correct alignment.

**Tone Arm Height**

To assure the best sound reproduction, it is very important the MT2 Tone Arm is parallel to the record surface during playback. The height of the Tone Arm is adjustable to accommodate the different Phono Cartridge physical heights. To adjust for the proper Tone Arm Height, perform the following steps:

1. Release the Tone Arm from the Tone Arm Rest, place it on a record and check to see if the Tone Arm is parallel to the surface of the record. Refer to figure 25. With the Tone Arm parallel, no adjustment is needed and proceed to “Setting the Tracking Force Pressure”. If the Tone Arm is not parallel, note whether the rear of the Tone Arm needs to go up or down.

2. With the Tone Arm secured in the Tone Arm Rest, carefully loosen the set screw while supporting the rear of the Tone Arm. Reposition the Tone Arm based on findings in the previous step. Temporarily tighten one of the set screws. Refer to figure 26.

3. Release the Tone Arm from the rest and place it on a record and check to see if the Tone Arm is now parallel. Also check to make sure the Tone Arm is parallel to the record platter and the right side of the turntable base. Refer to figure 27.
4. With the Tone Arm parallel to the record surface, record platter and turntable base, tighten the set screw, which was loosened in step 2. If not, repeat steps 1, 2 and 3 until the Tone Arm is parallel.

**Setting the Tracking Force Pressure**
The MT2 is supplied with a Stylus Tracking Force Gauge for checking and adjusting the Stylus Tracking Pressure. The Gauge uses the “Balance Scale” methodology for measurement. Place the Gauge on the record mat and perpendicular to the front of the Tone Arm, with the Stylus Tip over graduation marks. Set the Anti-Skate Adjustment to minimum (refer to figure 32). Adjust the position of the Tone Arm Counterweight to establish a tracking force pressure in the middle of the recommend range from the Cartridge manufacturer as a starting place. Refer to figures 28 thru 31.

*Note: Usually, adjusting the tracking force pressure closer to the maximum setting recommend by the Cartridge Manufacturer will produce better sound with less record and stylus wear. Refer to “Trackability Adjustments” for additional information.*

**Anti-Skating Adjustment**
The MT2 has adjustable Anti-Skating to equalize the pressure on both sides of the record groove wall by rotating the Anti-Skating Weight Up and Down the threaded shaft, refer to figure 32.

**Trackability Adjustments**
During playback of Phonograph Recordings, the stylus assembly is subjected to all kinds of extreme operating conditions. One of those conditions is the forces constantly trying to push the stylus up and out of the grooved wall of the recording. Another condition is the uneven side to side pressure applied to the stylus as it tries to stay in contact with both sides of the groove wall of the recording. Refer to figure 35.

The Anti-Skating Adjustment permits equalizing for even side to side pressure. The correct amount of Tracking Force Pressure and Anti-Skate Pressure varies with the exact shape of the Stylus Tip and finally the audio signal (both frequency and amplitude) contained in the groove wall of the record.

To achieve good performance and the least amount of Stylus Tip/Record Groove wear, use a Trackability Test Record. Both Tracking Force and Anti-Skate Adjustments are made as a result of listening to the test record to reduce different forms of audible distortions. Never exceed the manufacturers recommend Maximum Tracking Force Pressure Setting.

Your McIntosh Dealer, using Test Measurement Equipment and Professional Test Recordings, can achieve via adjustments, the best possible sound quality from your record collection and ensure the greatest longevity.
Connect to the AC / DC Adapter supplied with the MT2 Turntable. Then connect the AC / DC Adapter to a live AC outlet. Refer to information on the Power Supply to determine the correct voltage.

Audio OUTputs connect to PHONO Inputs of the Preamplifier, Integrated Amplifier or A/V Control Center. For specific information on the type of Phono Input to use, please refer to the next page.

GND (Ground) connects to GND (Ground) connection on the Preamplifier, Integrated Amplifier or A/V Control Center.

Fine speed adjustments for 33-1/3 and 45 rpm. These Adjustments require special test records and precision measurement equipment to accurately set the speeds. Contact your McIntosh Dealer for assistance.
How to Connect the Turntable

1. Connect a wire from the MT2 GND (Ground) Post to the GND (Ground) Post on the McIntosh Preamplifier, Integrated Amplifier or A/V Control Center.

2. Connect Audio Cables from the MT2 OUT LEFT and RIGHT Jacks to the MC (Moving Coil) Inputs on a McIntosh Preamplifier, Integrated Amplifier or A/V Control Center.

   Notes: 1. The MT2 Turntable with the Blue Point No. 2 High Output Moving Coil Cartridge may also be connected to most McIntosh Preamplifiers, Integrated Amplifiers or A/V Control Centers with a Moving Magnet Phono Input.
   2. For additional information about obtaining optimum performance from the installed phono cartridge, refer to page 16 “Phono Cartridge Loading”.
   3. Contact your McIntosh Dealer for additional information and assistance.

3. Connect the supplied AC / DC Adapter to the MT2 DC IN 12V socket and the Power Supply to a live AC outlet.
Switch, Lever and Record Clamp

Record clamp helps to keep the phonograph recording flat during playback

Power and Speed Switch turns AC Power OFF or On with selection of 33 1/3 rpm or 45 rpm Playback speed

Raises and lowers the Tutable Tone Arm
How to Operate the Turntable

Power and Speed Selection
Rotate the POWER and SPEED Switch to select the playback speed (33-1/3 rpm or 45 rpm) of the phonograph record to be played. Refer to figure 36.

Power Off - The Top Panel illumination is switched OFF and there is no Turntable Platter rotation.
Power 33 - The Top Panel is illumination and the Turntable Platter is rotating at the 33-1/3 rpm speed.
Power 45 - The Top Panel is illumination and the Turntable Platter is rotating at the 45 rpm speed.

Phono Cartridge Loading
For optimum performance it is important the Phono-Cartridge be connected to the correct load impedance. Refer to the respective Owner’s Manual for the Preamplifier, Integrated Amplifier or Audio/Video Control Center used with the MT2 for additional information.

The Blue Point #2 Cartridge supplied with the MT2 Turntable is a Moving Coil Type with High Output. Set the load resistance to 1,000 Ohms (or the closest available value).

Tone Arm Lift
The McIntosh MT2 Precision Turntable has a Tone Arm Lift Mechanism for safe placement and removal of the cartridge stylus on the phonograph record. Perform the following steps:
1. Push on the top part of the Tone Arm Lift Lever towards the rear of the turntable. Refer to figure 37.

Tone Arm Holder

2. Release the Tone Arm from the Tone Arm Holder.
3. Position the Tone Arm over the desired spot of the Phonograph record.
4. Pull on the top part of the Tone Arm Lift Lever towards the front of the turntable to begin playback.

Packing Instructions

In the event it is necessary to repack the equipment for shipment, the equipment must be packed exactly as shown below. It is very important the four feet are still attached to the bottom of the equipment. This will ensure the proper equipment location on the Platter foam pads. Failure to do this will result in shipping damage.

Use the original shipping carton and interior parts only if they are all in good serviceable condition. If a shipping carton or any of the interior part(s) are needed, please call or write Customer Service Department of McIntosh Laboratory. Refer to page 2. Please refer to the Part List below for the correct part numbers.
